Aquamax's Sanitation Service

As a result of the recent SARS-CoV-2 outbreak or as most refer to it as COVID-19, Aquamax understands just how important it is for businesses to create safe and sanitised areas for workers and the general public to feel comfortable in these unprecedented times.

As water jetting specialists, with highly skilled operators on hand, we are now offering an industrial level clean and sanitation service.

Our COVID-19 clean and sanitation process has 3 steps. These are in-line with guidelines from the World Health Organisation (WHO) and New Zealand's own Ministry of Health, which are:

Step 1:

A top to bottom approach, pressure washing (up to 3000 psi) to remove any dirt, mould, and grime from surfaces

Step 2:

Leave the area to dry for at least 30 minutes

Step 3:

Apply an application of bleach at a concentration of 0.5% (or a medical grade sanitiser if you prefer)

This application can be used to clean and then disinfect both external and internal areas. This includes, carparks, industrial and manufacturing facilities, warehouses, postal and logistics centres, medical facilities, shopping centres etc.

What Our Sanitation Service Covers:

- Industrial level clean and sanitation service
- Use of high-pressure water jetting equipment to clean first, then an application of sodium hypochlorite as an approved disinfectant
- Work can be undertaken outside of business hours, if required, so as not to disrupt productivity
- We follow all Government Approved Health & Safety guidelines, including the use of Personal Protective Equipment (PPE) and social distancing

If you are concerned about a potential COVID-19 contamination or want to reduce the risk of COVID-19 in the workplace then
